How to connect to the guest network in Windows 10 Home Edition

Right click on the WiFi icon in the bottom right of your screen and select Open Network and Sharing Center

Click set up a new connection or network
Click Manually connect to a wireless network. Click next.

Create the connection using the following settings, then click Next.
Select change connection settings

On the Security tab, click the Settings button next to authentication method.
Uncheck the verify the server’s identity by validating the certificate. Then click the Configure button next to Select Authentication Method.

Uncheck Automatically use my windows login name......Click OK, then click OK again.
Back on Security tab, click on Advanced settings button

Check the box Enable Single sign on for this network and click on OK.

Click OK again to close.....and then should be able to sign in using your network credentials.
