Overview:

School Improvement Plan for Student Achievement K to 12

The School Improvement Plan for Student Achievement and Well-Being (S.I.P.S.A.-W.B.) K to 12 is:

- A precise description of goals and actions that a School will take to improve learning, well-being and achievement for students, with a focus on:
 - Achieving Excellence;
 - Ensuring Equity;
 - Promoting Well-Being; and,
 - Enhancing Public Confidence.

Achieving Excellence A Renewed Vision for Education in Ontario 2014

The School Improvement Plan for Student Achievement and Well-Being is informed by the Board Improvement Plan for Student Achievement and Well-Being.

The purpose of a School Improvement Plan for Student Achievement and Well-Being (S.I.P.S.A.-W.B.)

The school improvement plan fulfills various purposes at each level of the Board. The purpose of the School Improvement Plan for Student Achievement K to 12 (S.I.P.S.A.-W.B.) in the Greater Essex County District School Board (GECDSB) is to:

Board

1. Improve Student Achievement and Well-Being
2. Provide a process of quality assurance, public accountability and public confidence.
3. Support Superintendents and Principals as they lead others towards system goals as stated in the GECDSB's Board Improvement Plan for Student Achievement (B.I.P.S.A.-W.B.).
4. Provide a system planning process in an effort to facilitate the achievement of system goals.

The School Improvement Plan for Student Achievement (S.I.P.S.A.-W.B.) is comprised of three components: Comprehensive Needs Assessment of Data; Planning, Design and Implementation Strategies; and Monitoring Strategies. These components are structured around nine (9) essential steps:

- Analysis of Data (student achievement, instructional practice, demographic, perceptual)
- Indicators from the K-12 School Effectiveness Framework Indicators & Evidence that relate to the SMART goals;
- SMART goals;
- Targeted, research driven, evidence-based strategies;
- Resources;
- Professional learning;
- Incremental Progress Monitoring;
- Monitoring Responsibility; and,
- Evaluation Cycle.

Elements of the School Improvement Plan for Student Achievement K to 12

The GECD SB School Improvement Planning Model provides a structure to align current research and best practice, with the School Effectiveness Framework K to 12 document, and the Board Improvement Plan. The goal is to provide a tool for creating precise, strategic and school-specific plans that directly align high yield instructional strategies with the specific student learning needs identified by each school.

The key principle of the School Improvement Plan for Student Achievement model is that of *Precision*. The School Improvement Plan for Student Achievement (SIPSA-WB) will assist schools in developing this instructional precision through a formal planning process and structure.

- i) The School Improvement Plans for Student Achievement and Well-Being, will serve as action plans, identifying a limited number of precise strategies that have been selected, applied and monitored to address the specific needs of the targeted group or sub-group of learners, outlined in the SMART Goal(s).
- ii) The GECD SB School Improvement Plan for Student Achievement and Well-Being model incorporates nine (9) research-based elements designed to maximize precision, focus and implementation. These elements, categorized under the headings, (A) Comprehensive Needs Assessment of Data, (B) Planning design and Implementation Strategies, and (C) Monitoring Strategies, are detailed in this document.

A. COMPREHENSIVE NEEDS ASSESSMENT

Analysis of Evidence

To ensure that the goals that schools select are the most important ones, schools must complete a Comprehensive Needs Assessment of Data that collects and analyzes not only ‘student performance evidence’ (such as student achievement scores: EQAO, OSSLT, DRA, report cards marks and common assessments), but also ‘instructional practice evidence’ (teaching strategies/ practices, or the number of classrooms that engage in a specific teaching/learning strategy). A Comprehensive Needs Assessment of Data ‘drills down’ the evidence to sub-skill and subgroup levels to spotlight the greatest needs of students. Student Achievement Evidence incorporates Provincial, Board and school level assessments (e.g. EQAO, OSSLT, CASI), but also report card marks, learning skills data, IEP recommendations, and attendance and credit accumulation data. Demographic and Perceptual Evidence is also explored to reveal patterns and trends for consideration in the Comprehensive Needs Assessment of Data

The School Effectiveness Framework K to 12

The School Effectiveness Framework K to 12 document (SEF), outlines Indicators and Evidence of effective schools. Thirty-One (31) indicators are identified and categorized under the six Component headings: Assessment for, as, and of Learning; School and Classroom Leadership; Student Engagement; Curriculum, Teaching and Learning; Pathways, Planning & Programs; and Home, School and Community Partnerships (see SEF K to 12: Components and Indicators p. 15). Each Indicator is described in terms of what it looks like/sounds like at the District, School, and Classroom level. Indicators are also described in terms of the actions and skills that students can demonstrate. The SEF process requires each school to conduct a Self Assessment, based on the six (6) Components and thirty-one (31) Indicators annually. The Self Assessment process assists schools in exploring their progress towards the full implementation of the

Indicators and Evidence of effective schools – identifying areas of strength, and areas requiring additional focus. The SEF Self Assessment process is an essential component of the Comprehensive Needs Assessment model for schools. Whole staff engagement in the process of evaluating ‘student performance evidence’, and ‘instructional practice evidence,’ and aligning these findings with the SEF K to 12 Indicators and Evidence of Effective Schools document, will allow schools to develop a precise and accurate baseline for effective improvement planning.

Inquiry

The Inquiry process serves to narrow the focus of your Comprehensive Needs Assessment. The goal in the Inquiry process is to answer these questions: Which learning skills/strategies do our students struggle with the most? What group of students is most in need of improvement? In what aspects of the learning skill/strategy are students the weakest? Which instructional and leadership practices will most likely lead to the most rapid rate of growth for our students? The Strategic Planning Chain (Appendix E) provides a model for the Inquiry process.

When narrowing the focus and prioritizing school needs and strategies, make sure that the needs and goals that are identified are indeed factors within your direct control (such as instructional and leadership practices) and are school-based (instruction, assessment, and organizational practices).

B. PLANNING, DESIGN AND IMPLEMENTATION STRATEGIES

SMART Goals: Specific Statements

Make certain that your ‘goal statements’ are specific in identifying both, the learning skills/strategies to be addressed, and the students who are targeted for improvement. Goals must also be targeted to the specific individuals (grade levels, or other identified groups of students) most in need of improvement, based on your Comprehensive Needs Assessment of Data.

SMART Goals: Measurable Statements

School Improvement Goals must be measurable and include a baseline of performance. It is critical to establish quantifiable outcomes for each goal. Measurable goals allow us to recognize and celebrate successes and gains when they are made throughout the process. This is impossible to do if you do not know the starting point of performance. The baseline data also justifies the need for improvement in a given area.

SMART Goals: Achievable Statements

Ensure that your ‘goal statements’ reflect an improvement level whereby attainment of the goals makes a significant impact on school level achievement and also guides school practices in Monitoring Strategies. The improvement target, therefore, needs to be challenging and serve as a catalyst for change, but also be based on the realities of the baseline data at each individual school.

SMART Goals: Relevant Statements

School Improvement Goals must precisely align with the priorities/needs established through the Comprehensive Needs Assessment of Data. Ask yourself, “Given the data that we have just reviewed and

the priorities that we have set, does this SIPS-A-WB goal directly lead to improvement in our area of identified need?”

SMART Goals: Timely Statements

Establish specific dates for measurement for all of your School Improvement Plan for Student Achievement and Well-Being goals. In addition, consider specifying in your plan, when the data will be reviewed and analyzed to evaluate the progress of the plan.

Targeted, Evidence-Based Strategies and Action Steps

Ensure that the Targeted, Evidence-Based Instructional Strategies/Action Steps, are informed by the research on effective teaching practices and that they target the students for whom the research-based strategies have proven most effective.

The School Effectiveness Framework K to 12, Indicators and Evidence document is founded on research-based, high yield strategies. Schools should ensure that this document serves as the center-piece for discussions about improving student achievement.

Resources

Intentionally explore the key resource and support documents that are connected to your SMART Goals, instructional strategies and Action Steps. The use of these references supports the development of common language and understanding for staff, and grounds the S.I.P.S.A.-W.B. in current, research-based practices. Consider including the following documents: Think Literacy, Guides to Effective Instruction, Growing Success, Learning For All, Education For All, GECD SB Thumbnail Sketches, Curriculum Documents, LNS Monographs, DVDs, EDUGains as well as other Board and Ministry supports.

Professional Learning

When developing the SMART Goals, it is important to recognize the specific learning needs for staff associated with each instructional strategy.

Identify a handful of critical professional learning components (specifically, five or fewer) that will have an impact on student achievement and are aligned with your school, Board and Ministry goals. Ensure that a majority of your professional learning strategies maintain a school-based focus. For instance, teachers should learn new instructional strategies to be applied in their classrooms with grade, division, or department colleagues. As well, administrators must also learn how to supervise, support, and monitor teachers in using these new strategies.

Parental Engagement Strategies

When possible, develop a Parent Engagement Action Step for each goal that describes engaging and empowering ways to include parents in improving student achievement. Current research supports the assertion that the most effective forms of parental involvement are those that engage parents in working directly with their children on learning activities in the home. Identify and then address areas in which parents might need further training, education, and coaching to support your identified improvement goals (e.g., providing workshops and content specific learning for parents on their role in supporting Math instruction at home for Primary students; or instructing parents in how to use your non-fiction guardians writing rubric at home with their children on writing tasks). Research in this area indicates that parents generally want and need direction to participate with maximum effectiveness.

C. MONITORING STRATEGIES

Progress Monitoring of SMART Goals

Establish a clear plan for monitoring School Improvement Plan for Student Achievement and Well-Being goals. The plan should clearly state what evidence will be collected, who is responsible for monitoring and reporting progress, and how often monitoring and reporting will occur. The Monitoring Strategies should include a continuous improvement cycle that describes opportunities to alter the plan and make midcourse adjustments. To accomplish this and reduce gaps in student learning, identify small-scale, school and Board-developed assessments that can be monitored with greater frequency, whenever possible. The plan should also clearly articulate the type of evidence to be collected and analyzed, including both ‘student performance evidence’ and ‘instructional practice evidence’.

Developing a monitoring schedule that tracks the key evidence of your S.I.P.S.A.-W.B. three or more times annually allows for much greater precision, a continuous focus on the identified goals, and opportunities to modify the plan as the evidence dictates. The timing of the evidence collection should be coordinated with opportunities for staff analysis, reflection and planning based on the evidence. It is critical to create opportunities to make a midcourse correction (change in Targeted Instructional Strategies or Action Steps) within your plan based on the data that you are monitoring. The most effective school plans set aside time to review progress toward goal achievement and make subsequent adjustments in instructional practices at prescribed intervals throughout the year.

Responsibility

Make certain that you provide clear guidance for planning, implementation and monitoring, and identify an appropriate person to be responsible for seeing the Action Steps to completion. Having everyone responsible for the actions steps is significantly less effective than identifying a ‘champion or advocate’ for each step, whose responsibility it is to coordinate a specific component of the plan. Make certain that the Actions Steps and timelines for goals are coordinated with each other.

Evaluation Cycle

The Monitoring Strategies should be designed to compare anticipated outcomes with actual results in student achievement evidence and instructional practice evidence. The Evaluation Cycle should be designed to describe how ‘lessons learned’ in the S.I.P.S.A.-W.B. process will be applied to future learning plans. The evaluation plan should also be designed to be transparent in describing how the compared results (positive and negative) are communicated to the primary stakeholders.

The process of identifying school needs, developing an improvement plan, and monitoring the results is cyclical. The Evaluation Cycle allows a staff to compare the intended outcomes of the plan they developed with the actual results from the evidence collected throughout the year. This analysis forms the basis of the Comprehensive Needs Assessment of Data for next year’s continuous improvement cycle.

K-12 School Effectiveness Framework

A support for school improvement and student success.

GREATER ESSEX COUNTY District School Board

K-12 School Effectiveness Framework

A support for school improvement and student success.

Priorities:

- Achieving Excellence
- Ensuring Equity
- Promoting Well-Being
- Enhancing Public Confidence

Beliefs:

- All students can achieve high standards given sufficient time and support.
- All teachers can teach to high standards given the right conditions and assistance.
- High expectations and early intervention are essential.
- Educators *need to learn all the time* and they need to be able to articulate both what they do and why they do it.

Assessment for, As and of Learning

Students and teachers share a common understanding of the learning goals and related success criteria.

During learning, students receive ongoing, descriptive feedback based on the success criteria, from the teacher and peers.

Students are taught, and regularly use self-assessment skills to monitor their progress toward achieving learning goals, and to set their own learning goals within the context of the Ontario curriculum and/or individual Education Plan (I.E.P.)

Assessment tasks are aligned with the curriculum, collaboratively developed by teachers and the resulting demonstrations of student learning analyzed to ensure consistency with success criteria.

A variety of valid and reliable assessment data is used by students and teachers to continuously monitor learning, to inform instruction & assessment and to determine next steps.

Assessment of learning provides evidence for evaluating the quality of student learning at or near the end of a period of learning.

Ongoing communication is in place to allow students, teachers and parents to effectively monitor student learning.

School & Classroom Leadership

Collaborative instructional leadership builds capacity to strengthen and enhance teaching and learning.

Processes and practices are designed to deepen content knowledge and refine instruction to support student learning and achievement.

Organizational structures are coherent, flexible and respond to the needs of students.

Job-embedded and inquiry-based professional learning builds capacity, informs instructional practice and contributes to a culture of learning.

Staff, students and school community promote and sustain student well-being and positive student behavior in a safe and healthy learning environment.

Student Engagement

The teaching and learning environment is inclusive and reflects individual student strengths, needs and learning preferences.

School programs incorporate students' stated priorities and reflect the diversity, needs and interests of the school population.

Students are partners in conversations about school improvement.

Explicit strategies are in place to enable students to demonstrate strong citizenship skills such as leadership, teamwork and advocacy.

Curriculum, Teaching & Learning

A culture of high expectations supports the belief that all students can learn, progress and achieve.

A clear emphasis on high levels of achievement in literacy and numeracy is evident throughout the school.

Teaching and learning incorporates 21st century content, global perspectives, learning skills, resources and technologies.

Learning is deepened through authentic, relevant and meaningful student inquiry.

Instruction and assessment are differentiated in response to student strengths, needs and prior learning.

Resources for students are relevant, current, accessible and inclusive.

Timely and tiered interventions, supported by a team approach, respond to individual student learning needs.

Pathways to Program Planning

Programs, pathways, and career planning meet the learning needs and interests of all students.

Authentic learning experiences and experiential learning are built into all subject areas and programs.

Students, parents, and teachers understand the full range of pathways, options, programs and supports that are available.

Students have opportunities to build on in-school and out-of-school experiences and activities to further explore personal interests, strengths and career options.

Home, School & Community Partnerships

The School Council has a meaningful role in supporting learning and achievement for students.

Students, parents and community members are engaged and welcomed as respected, valued partners.

The school and community build partnerships to enhance learning opportunities for students.

Learning opportunities, resources and supports are provided to help parents support student learning and have productive parent-teacher-student conversations.

Strategic Planning Chain

A 'treasure hunt' into learning and strategic planning begins with a need to know something – a theory, a question, or a hypothesis that has come to us through some natural flow of logic, observation and evidence.

Which instructional strategies lead to the most rapid rate of growth for the targeted group?

→ Evidence

What sub-group of students are most in need of improvement?

→ Evidence

In which critical expectations/skills are our students the weakest?

→ Evidence

What part of the curriculum do our students struggle with most?

→ Evidence

Evidence/ Data
-Aspects of Skills
-Investigate research-based strategies
-Consult expertise

Evidence/ Data
(Disaggregated by sub-groups & sub-skills)

Evidence/ Data
-EQAO, DRA
-SEF, CASI
-Common Assessments

Adapted from The Handbook for SMART School Teams. 2002, p.63

The Virtue of 'Ugly Plans'

"I'm sorry that this document is a bit of a mess, but since my leadership team wrote this plan a few months ago, we've had changes in our student population, changes on our [staff], and new student achievement data. We've had to modify some goals and add others. We've had to add some intermediate objectives so that we can continuously monitor our progress and be aware of continuing changes during the school year. In fact, I can't promise you that this document won't change again in the months to come as we attempt to monitor our progress and make mid-course corrections."

The Learning Leader, D. Reeves. 2006, p. 63
